NATURAL RESOURCES, AND POPULATION.

EXPLANATION OF TERMS.

General imports.—Tables Nos 187 and 188 embrace imported articles entered at the custom-houses for immediate consumption and imported articles entered for warehouse. The statements of *imports entered for consumption*, Tables Nos 192 and 198, embrace imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of *general imports* and the statement of *imports entered for consumption* for any period will always differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "entry for consumption" is the technical name of the import entry made at the custom-house, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterwards exported.

Import values.—The values or prices of articles imported since August 1, 1890, are governed by the provisions of section 19 of the act of June 10 1890, which prescribe that the values of imported merchandise subject to ad valorem rates of duty shall be the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation to the United States in the principal markets of the country from whence imported, and in the condition in which such merchandise is there bought for exportation to the United States or consigned to the United States for sale, including the value of all cartons, cases, crates, boxes, sacks, and coverings or any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition ready for shipment to the United States.

Domestic export values.—Tables Nos 189 and 190 exhibit the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported, or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles and utensils made from imported metals, etc. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign export values.—Table No 191, called "foreign exports," or "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported from "warehouse" is their import value. The value of such commodities exported "not from warehouse," comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Values of foreign merchandise in transit or transhipped.—Table No 197 exhibits foreign merchandise brought to the United States for immediate transit across the territory of the United States to a foreign country, or for transshipment in the ports of the United States to a foreign country. The value of the commodities returned in this table is similar to that of imports.

Values of warehoused merchandise.—Tables Nos 195 and 196 exhibit imported merchandise in warehouse. This merchandise has already appeared in the statement of *general imports*, Tables Nos 187 and 188, for the year in which it was imported. The official values of the articles therein represented are the same as the *import values*.

Ton.—The term "ton" used in this volume, as applied to weight, is specified "long" (2,240 pounds) or "short" (2,000 pounds). The term "ton" as applied to vessel measurement is specified as "net," equal to 100 cubic feet of carrying capacity exclusive of deductions for space occupied by cabins, machinery, etc., or "gross" equal to entire carrying capacity inclusive of such deductions. The term "M feet" used in connection with the measure of lumber, etc., signifies 1,000 feet, board measure, a "foot" of such measure being 1 foot long, 1 foot wide, and 1 inch or less in thickness. "Cubic feet" or "cords," as applied to the measurement of lumber, pulp wood, etc., signifies cubic contents.

^g The number on June 30, 1907, in the corresponding table for last year was 194,918, which has been reduced to 194,332 by corrections made possible by Census Bulletin No. 94 and other sources of information respecting parts of the service for which changes are not reported.

^h Changes in the force subject to examination only are reported and included in the body of the above table.

^a Owing to the fact that the papers of a large number of persons examined during the fiscal year ended June 30, 1908, have not yet been rated, these figures are necessarily omitted.

^b On account of the abundance of eligibles remaining from previous year, but few examinations were held, percentage upon the basis of these figures would therefore be deceptive.

No. 24.—DENSITY OF POPULATION PER SQUARE MILE AT EACH CENSUS, 1790 TO 1900: BY STATES AND TERRITORIES.

[From reports of the Bureau of the Census, Department of Commerce and Labor.]

[NOTE.—In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States prior to 1890, although the population of these Indian reservations was not ascertained, and for this reason can not be considered in figuring density of population at the censuses prior to 1890.]

^a The gross value of manufactures as reported by the Census contains many duplications because the finished products of some factories frequently become the material for other factories. In this way not only one but several duplications of the cost of materials often occur. The net value of productions eliminates these duplications by deducting from the gross value the cost of all materials which have undergone any process of manufacture covered by the census reports on manufactures.

^b The figures of production for 1900 differ from those shown in other portions of this volume for that year by reason of the fact that they exclude 10 lumber establishments reported for Alaska with products valued at \$4,250,984.

^c "Hand trades" not included in the census of 1905.

^b By purity coefficient is meant the percentage of sugar in the total solids of the substance tested, whether it be beets, juice, or sirup. In this table it represents the average percentage of sugar in the total solids of the beets as determined by tests made at the factories

^c Based on reports from 27 factories and careful estimates for 14 others

^d These averages are not based on data for all the factories, as some of them failed to report results of tests, but it is believed that they fairly represent the character of the total beet crops

^e No data reported

^f Grouped together to avoid giving publicity to data relating to individual factories

^g The average yield of beets per acre is found by dividing the total beets worked by the total acreage harvested, the average extraction of sugar by dividing the total sugar produced by the total beets worked, the average contents of sugar, coefficients of purity, and length of campaign by adding the figures reported by the different factories and dividing by the number of reporting factories

^c The Mississippi River Commission endeavors to maintain a channel with a least depth of 9 feet at low water and 250 feet wide between St. Louis and New Orleans

^d Total distance, 10 miles

^e Total distance, 434 miles, navigation interrupted by rapids and fixed dams for 79.5 miles

^f Depth for only a part of the navigable length given

^g Fiscal year 1906

^h Average for 17 years, 178,429 tons

ⁱ All these streams are tributary to the Ouachita River and are not navigable for steamboats at low water. Improvement has enabled larger boats to run and to make trips in less time than was required formerly, lengthened the period of navigation, and resulted in lower rates of freight

^j Average for 17 years, maximum in 1891, 49,299 tons, minimum in 1905, 2,007 tons

^k Average for 17 years, maximum in 1897, 11,261 tons, minimum in 1903, 545 tons

NOTE BY MESSRS MAUGER & AVERY.—This table exhibits in a concise form the prices of the three grades of a standard domestic fleece wool in the seaboard markets at the beginning of each quarter in its present shape it is deemed to be intelligible to all interested in wool. In the special features of character and condition, "washed Ohio fleece wool" is less subject to variation than any other description, and thus is more a basis of value than any other class. Wool, owing to its wide variety, difference in character and condition, and liability to shrink in cleaning, is precluded from speculative operations which apply to products which may be dealt in as "futures." For these reasons the prices of wool are not liable to the same changes as cotton, wheat, etc.

^a The price on board fixed at Baltimore by the Seaboard Coal Association

^b Price of soft-coal pool

^c Owing to unusual conditions in the coal market the association price for 1902 is not a correct guide as to the actual selling price, Clearfield coal selling as high as \$7 at the mines and as high as \$9 in New York Harbor. Unsettled conditions lasted until the 1st of March, 1903, or nearly so, then, on April 1, prices were made \$3 30 at Baltimore, later on in the year this price was discounted from 10 to 15 per cent.

^d Shipments nominal

^e Cumberland coal now includes "thin seam" as well as "big vein" coal, the former selling about 25 cents per ton lower than the latter.

No. 229.—RELATIVE WHOLESALE PRICES OF RAW AND OF MANUFACTURED COMMODITIES, 1890 TO 1907, AND PER CENT OF INCREASE IN PRICES FOR 1907 OVER PRICES FOR EACH PRECEDING YEAR.

[From reports of the Bureau of Labor, Department of Commerce and Labor. This table summarizes wholesale prices of 258 staple commodities. The commodities designated as "Raw" are such as are marketed in their natural state and also such as have been subjected to only a preliminary manufacturing process, this group includes 50 articles. The commodities designated as "Manufactured" are such as have been subjected to more than a preliminary factory manipulation and in which the manufacturing labor cost constitutes an important element in the price, this group includes 208 articles. A relative price, or index number, as it is technically called, of any article is the per cent which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for this compilation is the average price for the ten-year period 1890 to 1899. The relative prices shown under each group are simple averages of the relatives of all articles included within the group. Average price for 1890-1899=100.]

No. 231.—RELATIVE RETAIL PRICES OF THE PRINCIPAL ARTICLES OF FOOD:
1890 to 1907

[From reports of the Bureau of Labor, Department of Commerce and Labor. The total number of statements of prices collected by the Bureau of Labor in 1906 was 6,176 from 993 retail merchants. The number has varied somewhat from year to year. The 993 merchants are located in 69 cities, which are principal industrial centers of 39 States. For each of the 30 articles the prevailing price each month was secured. As previously explained under the title of wholesale prices, the relative price of any article is the per cent which the price of that article at any date is of the price of the same article at a date or period which has been selected as the base or standard. The base selected by the Bureau of Labor for retail as well as for wholesale prices is the average price for the ten-year period 1890 to 1899. Average price for 1890-1899=100.]

^a The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting, a commercial crop which represents the trade movement is taken. The statistics of production have been compiled from publications of the United States Department of Agriculture for 1853 to 1898. Census figures have, however, been used when available, including those for 1899 to date.

^b The value of lint per pound shown since 1902 relates to the average grade of upland cotton marketed prior to April 1 of the following year, from 1890 to 1901, the average price of middling cotton on the New Orleans Cotton Exchange, and from 1858 to 1889, as published in reports of the United States Department of Agriculture.

^c Compiled from publications of the United States Department of Agriculture for 1858 to 1894, from the reports of Latham, Alexander & Co., for 1895 to 1903. Census figures have been taken when available. Discrepancies in the figures for census years as compared with those of the table entitled "Statistical Record of the Progress of the United States" are caused mainly by difference of method in the making up of the respective tables.

^d Compiled from "Commerce and Navigation of the United States," 1858 to date. The export year begins July 1, 1878 to 1886, and September 1 for 1867 to date. The period for consumption, exports, and imports is designated by the year in which the record begins rather than that in which it ends.

^e Equivalent bales of 400 pounds.

^f Excess of foreign exports over total imports.
